Juhwan Lee
CS300: Elements of Software Engineering
Professor Fei Xie

Exercise 1.3 (Textbook Pg. 19; Lecture Note Pg. 16):
Based on the example project vision for the iLearn system, identify the WHAT, WHO, and WHY for that software Product.

WHAT: It is an open learning environment that allows the set of resources used by classes and students to be easily configured for these students and classes by teachers themselves.
WHO: Teachers and other educators.
WHY: Unlike Virtual Learning Environments, such as Moodle, the focus of iLearn is the learning process rather than the administration and management of materials, assessments and coursework.
